

ENVY

PERENNIAL RYEGRASS

ENVY

PERENNIAL RYEGRASS

- Cold tolerant
- Resists brown patch and red thread
- Superior leaf color and density
- Lower growth
- Quick germinating
- Aggressive tillering

SUPERB WINTER HARDINESS EXCELLENT OVERSEEDER

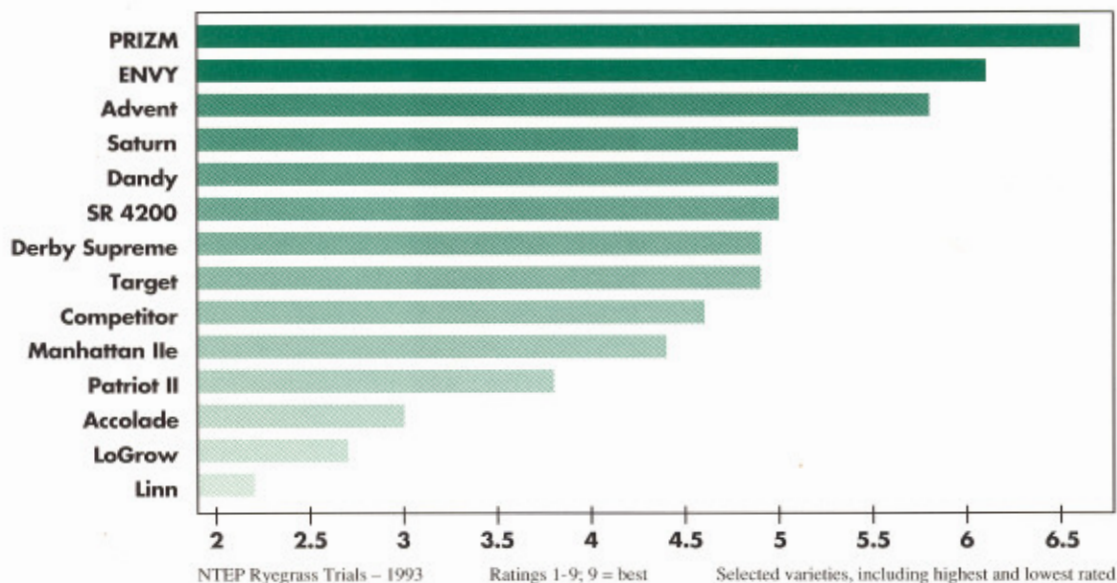

ENVY brings a new level of looks and performance to perennial ryegrasses. It's an elegant, leafy variety, that's brightly colored and blends perfectly with premium bluegrasses and fescues.

It germinates and fills in fast. Use ENVY in areas of high or abusive traffic, or where environmental stresses can impair less hardy varieties. Use it alone, in mixtures, as part of sod or seed programs. Its high tillering activity and lower growth assure a dense, compact turf that complements golf courses, athletic fields, corporate parks and residential lawns.

ENVY was bred for winter hardiness, but exhibits good heat tolerance as well. This all-season versatility—combined with excellent mowability, and superior disease and insect resistance—makes ENVY the ideal transition component for golf course overseeding.

ENVY—RESISTANCE TO BROWN PATCH

ENVY exhibits excellent overall resistance to disease, including common diseases such as red thread and brown patch. Brown patch is a particularly devastating disease during the hotter, high humidity seasons, and wherever air circulation is poor or maintenance levels of nitrogen high.

AREAS OF USE

- Traffic and wear areas such as golf course tees and fairways
- Sports stadiums and athletic fields
- Residential and corporate turf
- Sod blends
- Overseeding dormant bermudagrass

SUPERIOR PERFORMANCE CHARACTERISTICS

	COLOR	% SPRING COVER	RED THREAD RESISTANCE	
ENVY	7.0	90.0	6.2	ENVY is quick germinating and fast tillering. During early spring months, its percent cover is greater than that of most perennial ryegrasses. Its pleasing, bright-green leaf provides a luxuriousness to enhance any setting.
SR 4200	7.0	90.0	6.3	
Advent	6.9	86.7	6.2	
Saturn	6.7	90.0	6.3	
Patriot	6.7	88.3	5.6	
Dandy	6.7	85.0	6.7	
LoGrow	6.7	85.0	5.9	
Competitor	6.7	85.0	5.3	
Target	6.6	91.7	6.2	
Derby Supreme	6.6	86.7	6.2	
Accolade	6.5	85.0	5.3	
Manhattan IIe	6.3	90.0	5.6	
Linn	4.6	76.7	5.4

Selected varieties

Ratings: Color and Red Thread Resistance are rated on a scale of 1 to 9; Spring Cover is based on percent. In all instances, higher scores denote better performance.

SEEDING AND OVERSEEDING

ENVY establishes readily on bare soil or after verticutting existing turf for renovation and overseeding.

It should be applied at a rate of 5-7 lbs per 1000 sq. ft. for most new seeding applications. Periodic reseeding at 3-5 lbs per 1000 sq. ft. maintains density for superior durability and appearance.

For overseeding dormant bermudagrass, a rate of 30-40 lbs per 1000 sq. ft. is recommended for golf course greens, and 7-10 lbs per 1000 sq. ft. (300-400 lbs per acre) for tees, fairways and roughs.

MAINTENANCE

ENVY grows well in areas of full sun to light shade. It mows cleanly at heights of 1/2". Because of its density and tillering ability, ENVY can be cut at greens heights when appropriate management practices are observed.
