

The logo for METH-EX 40 is presented in a rounded rectangular shape. The left portion of the rectangle is light blue with the text 'METH-EX' in black, bold, sans-serif font, followed by a registered trademark symbol (®). The right portion of the rectangle is black with the number '40' in white, bold, sans-serif font.

METH-EX[®] 40

Meth-Ex 40 is a high activity methylene urea nitrogen source that provides extended turf feeding without the need for coatings. Microbial release allows Meth-Ex 40 to release nitrogen when the turf needs it the most. The result is a quick color response with no surge growth and a consistent and reliable long-term feeding schedule. Meth-E 40 technology is found in our Country Club, ProScape, Lebanon Pro and Woodace brands.

Controlled Release Nitrogen

GUARANTEED ANALYSIS

Total Nitrogen(N)40%

- 12.5% Water Insoluble Nitrogen*
- 6.5% Urea Nitrogen
- 21.0% Slowly available water soluble Nitrogen

Nutrient Sources: Methylene Ureas, Urea
Chlorine (Cl) not more than2.0%

* 21.0% Slowly available Nitrogen from
Methylene Urea

Meth-Ex 40 is LebanonTurf’s exclusive granular, controlled release methylene urea nitrogen with an activity index available that provides nitrogen release over 10 to 12 weeks through both hydrolysis and soil microbial activity.

Directions for Use

Meth-Ex 40 nitrogen is intended for use on any manicured turf and ornamental areas, including: golf courses, sod farms, home lawns, parks, cemeteries, nurseries, ornamentals, fruit, citrus trees and vegetables.

Turf Areas: (Optimum Maintenance)

Direct application to Cool-Season Turfgrasses (Kentucky bluegrass, perennial ryegrass, fescue, bentgrass): Apply 3.3 lbs. Meth-Ex 40 (1.33 lbs. N) per 1,000 sq. ft. in mid-spring, late summer, and mid-fall to provide 4 lbs. of N per 1,000 sq. ft. per year. Following each application, irrigate with sufficient water to wash the fertilizer off the leaf blades.

Direct Application to Warm-Season Turfgrasses (Bermudagrass, Zoysia, centipede, St. Augustine): Apply 3.3 lbs. Meth-Ex 40 (1.33 lbs. N) per 1,000 sq. ft. in mid-spring, early summer, late summer, and mid-fall to provide 5.3 lbs. of N per 1,000 sq. ft. per year. Some St. Augustine cultivars and hybrid Bermudagrasses require elevated levels of nitrogen for best performances.

Turf Areas:

(Moderate Maintenance) For Cool and Warm-season grasses, apply 4 lbs. Meth-Ex 40 per 1,000 sq. ft. in mid-spring and again in early fall. Supplies 3.2 lbs. N per 1,000 sq. ft. annually. For high N-requirement hybrid bermudagrass, make an additional application of 4 lbs. or Meth-Ex 40 in early summer. Following each application, irrigate with sufficient water to wash the fertilizer off the leaf blades.

Trees:

Surface: apply 1/2 lb. of Meth-Ex 40 per inch of trunk diameter uniformly under the canopy. Apply once annually in either late fall of late winter/early spring.

Landscape Ornamentals:

Surface: apply 1/3 lb. of Meth-Ex 40 per 100 sq. ft. around foundation planting including roses, rhododendrons and azaleas in early spring. Following each application, irrigate with sufficient water to wash the fertilizer off the foliage.
