EARLY GREENUP

WEAR TOLERANT

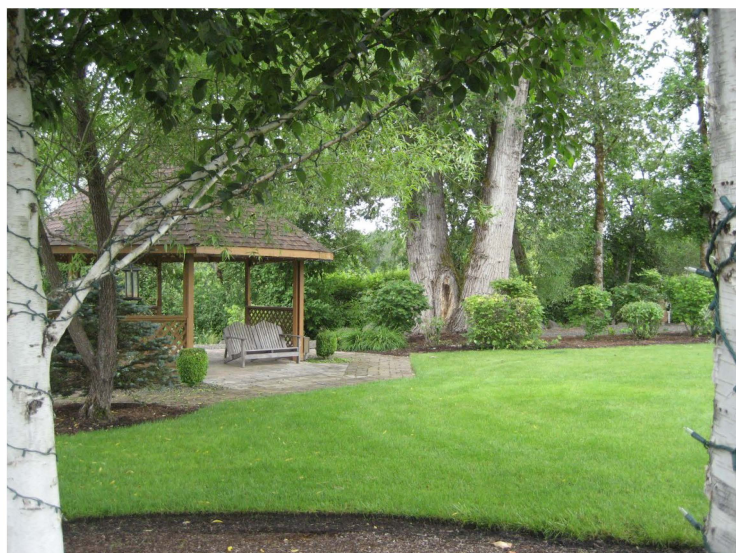

DISEASE RESISTANT

Chantilly

Creeping Red Fescue

QUICK FACTS

CHANTILLY (IS-FRR 51) is a beautiful strong creeping red fescue resulting from recurrent selections and crosses using plants from persistent older turfs and plants harvested from the Portland, Oregon area containing "Rose City Endophyte". The natural presence of endophyte works to repel surface feeding insects and subsequent vulnerability to stresses and disease, especially red thread (common in creeping red fescues). Possessing a dark green color with bright highlights, abundant tillers for increased density and the absence of leaf disease, the inherent beauty of Chantilly is evident in the quality of the turf produced.

ADAPTATION

CHANTILLY is best suited for ornamental lawns, golf course roughs and shaded fairways as a component in mixes or blends. Low growing and persistent under minimal management, Chantilly is ideal for low maintenance areas, parks, utility areas and commercial applications.

- ✓ MEDIUM GREEN COLOR
- ✓ DISEASE RESISTANT
- ✓ ENDOPHYTE ENHANCED
- ✓ WEAR TOLERANT
- ✓ EXCELLENT SPRING DENSITY

TRIAL DATA

2008 National Fine Leaf Fescue Test
2011 Data

Mean Quality Under Traffic

Chantilly (IS-FRR 62)	4.6
Navigator II	3.9
Epic	3.7
Shademaster III	3.6

Spring Density

Chantilly (IS-FRR 62)	8.0
Shademaster III	7.7
Navigator II	7.3
Epic	6.3

Red Thread (NY, PA)

Chantilly (IS-FRR 62)	5.8
Navigator II	5.3
Epic	5.2
Shademaster III	4.7

SEEDING RATES

4-6 lbs per 1000 square feet
