

TECH SHEET

FINE LEAFED

DARK GREEN COLOR

ENDOPHYTE ENHANCED

WEAR TOLERANT

DISEASE RESISTANT

QUICK FACTS

THRIVE (IS-PR 469) was bred specifically for freedom from leaf diseases and superior overall quality. Characterized by a lush turf with high tiller density, fine leaf texture and dark green color, Thrive is genetically superior in all areas considered significant when referring to a high quality turf. Thrive has demonstrated wear tolerance and early spring greenup. This variety is endophyte enhanced for natural resistance to surface feeding insects, subsequently reducing vulnerability to disease and stress.

ADAPTATION

THRIVE is well adapted for use in the Northeast, Transition and Pacific regions as a permanent turf and can be combined into mixtures where perennial ryegrass is an accepted component, used in blends or as a straight. It's designed for improving areas of extensive use and drought renovation. Thrive is an excellent choice for locations where diseases such as Gray leaf spot and brown patch are prevalent.

Thrive

Perennial Ryegrass

- ✓ LEAF DISEASE RESISTANT
- ✓ WEAR TOLERANT
- ✓ DARK GREEN COLOR
- ✓ FINE LEAF TEXTURE
- ✓ HIGH TILLER DENSITY
